SUSTAINABILITY POLICY

ENVIRONMENTAL & ENERGY CONSERVATION

1. ENERGY
CONSERVATION

2. WATER
CONSERVATION

3. WASTE DISPOSAL

4. PLASTIC
REDUCTION

Solar Cell Energy

Green Energy ➡ Our solar cell panels produce energy, help reduce our energy usage during the day and decrease our carbon footprint.

Home Grown Vegetables

Vegetables ➡ We grow our own pesticide-free herbs and vegetables. These farm-to-table vegetables are served in hotel restaurants.

Plants Nursery

Plants ➡ We grow our own flowers, decorative plants and trees for the whole property usage and strive to have a green hotel in a literal sense.

Natural Fertilizers Producing & Recycling

Organic Soil Fertilizer

Fertilizer ➡ We produce organic and natural fertilizers from our organic waste such as coconut husk.

Recycling

Recycling ➡ Oils from cooking stations are recycled as lamp oil in the evening for private romantic dining on the beach.

Water Treatment

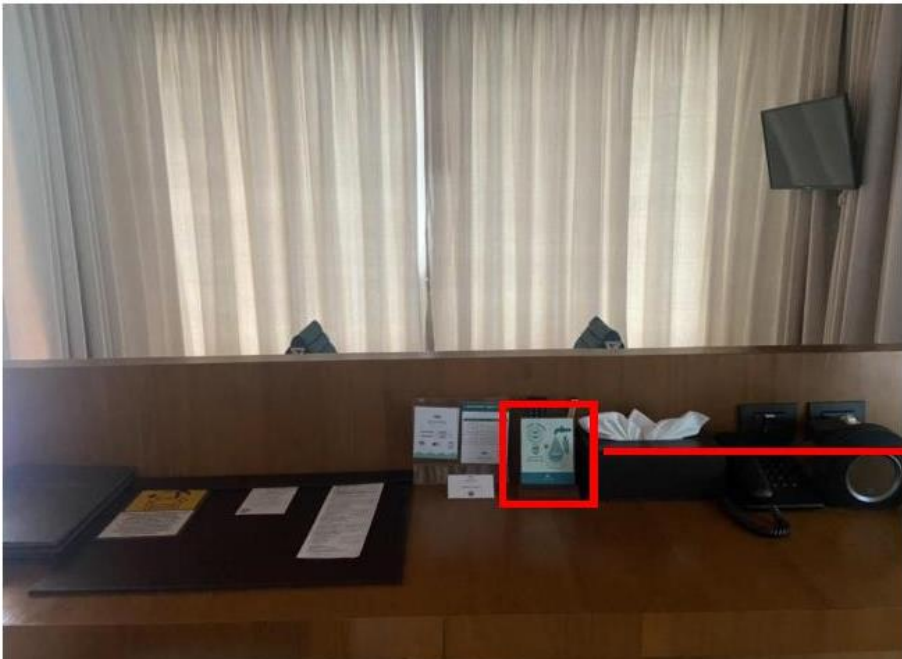

Water ➡ Sewage water goes through biological treatment to remove contaminants and produce treated wastewater. The treated water is reused in our large garden.

Energy Saving

Promote and place “**Energy Saving**” sign to promote cooperation from guests.

CORPORATE SOCIAL RESPONSIBILITY

Island and Gulf Cleaning

CSR ➡ We regularly arrange volunteer staff for Koh Mun Nai (Mun Nai Island) cleaning day activity as our Corporate Social Responsibility and Environment Protection, minimum 1 time per quarter and we also inform hotel volunteering guests who are interested in participating in the activity can save the island with us.

Supports & Donations

CSR ➡ We regularly support, help and donate consumer products and equipment needed to local organizations, hospitals and government, especially during COVID-19 pandemic or any other occasions that may need supports and helps.
